## **Demo: Rehabilitative ultrasound imaging of the lumbar spine**

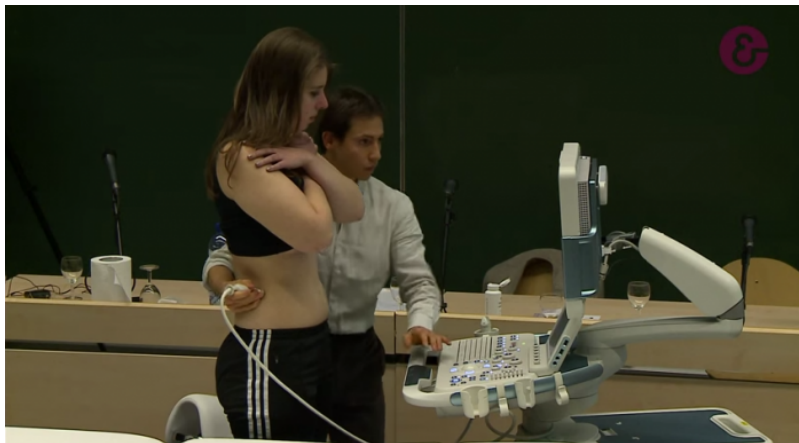

Using MSK ultrasound for biofeedback training of abdominal muscles and the multifidus.

Author : SonoSkills

MSK ultrasound can be used as a biofeedback tool during rehabilitative ultrasound imaging (RUSI) of the deep abdominal muscles and the multifidus.

This video shows a demo how to use MSK ultrasound for diagnostic, but also for rehabilitative (biofeedback) and evaluative, purposes in the rehabilitation of deep abdominal muscles and the multifidus.

This lecture is presented by Enrico de Martino, MD, [Sportsphysician at University of Siena, Siena, Italy; researcher at University of Queensland, Brisbane, Australia] during the [International Congress of Musculoskeletal Ultrasound](#), which was held in Amsterdam on March 28th, 2015.
